Kelly XL

Commode and showerchair

Safety & ease of use

One of the unique features of the commode chair is its central braking system. This prevents situations where, for example, not all wheels are locked, reducing the risk of the patient falling while sitting down or standing up. Reports from the MIP (Medical Incident Reporting) system have shown that falls with commode chairs often occur because not all wheels are properly braked. With the central braking system, the caregiver can be confident that all wheels are locked simultaneously. Additionally, this feature is more convenient for the caregiver, as they no longer need to lock each wheel individually.

Hygiene

The commode chair is made entirely of stainless steel, without any coating but with surface treatment for durability. The chair features exclusively rounded tubes, ensuring it is easy to clean thoroughly.

Sustainability

durability of the commode chair is a defining feature. Thanks to the choice of materials, we ensure a long lifespan for the frame. We have deliberately chosen to make the PUR components (seat and backrest) separate parts, allowing them to be easily reordered after 2 to 3 years. This eliminates the need to continually purchase new chairs, as seats and backrests can be replaced at minimal cost. This approach significantly reduces large expenditures for the hospital.

Development

The new commode chair, Kelly, was developed in close collaboration with healthcare professionals, end-users, and infection prevention specialists. The Kelly commode chair ensures patient safety, provides ease of use for caregivers, and is exceptionally easy to clean.

Accessories

Holder for lid

Footrests

Seat cover

Toilet roll holder

Dimensions

Material:	Stainless steel
Seat height:	50.5cm
Maximum Weight Capacity:	280 KG
Folable armrests	
Removeable seat	

Item Numbers

18.035.01	Commode chair Kelly Standard
18.035.02	Commode chair Kelly XL

"The commode chair is easy to use and also ergonomically designed, making it comfortable to work with."
